Field No.1 Organic Soil Improver

Product Specification

Field No. 1

Organic Soil Improver

A high quality soil improver manufactured to BSI PAS100 (2018) from composted organic material. Can be used as a mulch on beds and borders or incorporated directly into the soil. Field No.1 can also be used as a lawn dressing as part of a spring or autumn maintenance programme.

- **Field No.1** is the ultimate source of organic matter, a 1000L bulk bag will typically contain 125kg of organic matter which is nearly double the amount found in a 1000L bulk bag of manure.
- **Field No.1** provides an insulating “blanket” for the soil that will protect plants and bulbs from frost and severe weather conditions.
- **Field No.1** will stimulate worm activity and they will quite literally dig this valuable source of organic matter into the soil for you.
- **Field No.1** supplies plenty of potash which is nature’s answer to anti-freeze for plants.
- **Field No.1** naturally releases balanced levels of phosphate that will help stimulate root growth.
- **Field No.1** slowly releases nitrogen as the soil warms up helping to bring your garden back to life in the spring.
- **Field No.1** will encourage beneficial microorganisms in the soil that improve plants resistance to disease.

Directions for use

Use Field No.1 on your borders

1. Prune and weed your borders as part of your normal maintenance regime.
2. Calculate how much Field No.1 Organic Soil Improver you need. A 1m³ bag is enough to cover 20m² at a depth of 50mm. If you aren’t sure how much you need there is a handy calculator on our website or give us a call and we will do the calculations for you.
3. Apply an even blanket of Field No.1 Organic Soil Improver 50 – 75mm (2 to 3 inches) deep over your borders.
4. Incorporate into the soil to the depth of a spade or leave it on the surface of the soil as a mulch.
5. Top up the level of the Field No.1 every 4 to 6 months to help protect plants against frosts, suppress weed growth and hold moisture in the soil. This will also give plants a gentle feed of slow release nutrients and trace elements during the growing season.

Use Field No.1 on your lawn

1. Mow your lawn as part of your normal spring/autumn maintenance regime.
2. Use a spring rake to remove any moss and thatch.
3. Aerate your lawn using a fork or hollow tine to make holes of approximately 100mm (4inches) in depth.
4. Using a stiff broom evenly brush in a thin layer of Field No.1 to a depth of about 12mm (1/2 inch) over the entire surface of the lawn. For fine turf lawns or if you use a cylinder mower the Field No.4 Lawn Dressing is recommended in place of the Field No.1.
5. Select a suitable lawn seed to match your lawn and the type of application. Field Compost supplies a comprehensive range of lawn seed and we will be happy to recommend a product that best suits your needs.
6. Evenly sow the grass seed as per the instructions on the box.
7. Whilst waiting for the seed to germinate (Normally 2-3 weeks) keep mowing to a minimum and elevate the cutting height of your mower to avoid removing the Field No.1 from the base of the sward.

See overleaf for typical physico-chemical properties and nutrient content
